

Certificate in Health Care Policy and Administration

Email Contact: Kevin Simmons kevin.simmons@cuny.edu

The Program

The Certificate in Health Care Policy and Administration provides a basic academic foundation and professional development for administrative and professional workers in New York City's health care industry. An important professional credential, the certificate offers health care employees in both public and private health care systems an opportunity to advance their careers and serve the public more effectively.

Students will gain a rich understanding of the theory and practice of health care policy and administration while developing advanced analytic, research, writing and presentation skills.

The certificate is a valuable educational and professional credential for those working in government, non-profit organizations, and the private health care system. It is ideal for those currently employed within the field or interested in pursuing careers as health care managers and administrators, as well as public policy analysts and advocates.

Admissions Criteria

Candidates for admission to undergraduate level certificate programs must possess a high school diploma or a High School Equivalency (HSE) diploma from New York State (also known as TASC or GED).

Program Requirements

15 - 16 credits are required for the certificate. Students must complete 15 - 16 credits from the following courses:

HCA 300 - Urban Health Services and Institutions (4 Credits)

Prerequisite: None

This course will use New York City as the context within which to examine a variety of urban health services and institutions, reviewing their historical development, financing mechanisms and regulatory and legislative oversight. Service provision in private and public institutions will be compared and contrasted, and the impact of services examined within a wide range of health contexts, including HIV/AIDS services, mental health, disabilities services, reproductive services, elder care, child health, and more. The course will also analyze how class, race/ethnicity, gender and sexuality affect provision of and access to services. Policies that influence the delivery of services and the functioning of institutions, such as the development of managed care, will be critically analyzed.

HCA 301 - Urban Health Issues and Public Policy (4 Credits)

Prerequisite: None

This course will present a range of key health issues and problems that confront urban communities in the U.S. Students will examine the impact of these issues on the health of urban residents, with attention to variations in impact related to race, ethnicity, gender and class. Issues include environmental health, homelessness, urban substance abuse, access to care among disabled health care populations, infectious diseases, immigrant health, urban violence, occupational health for urban workers, among others. Policies that have been enacted or proposed to address each of these issues will be presented and critically evaluated throughout the course.

HCA 302 - Research Seminar in Health Policy (4 Credits)

Prerequisite: None

This course is a seminar in health policy that will focus on the topic of health services research and the role of research in supporting, creating, or challenging health policy. Each week, a component of research methodology will be

presented. In addition, assigned readings consisting of published research on health services will be utilized as a springboard for class discussion. Readings will be chosen for their usefulness in illustrating the research methodology under discussion. In addition to critically evaluating each of these research reports in class discussions, students will work in teams to: identify a researchable problem based on their workplace experiences; formulate the research question and hypothesis; identify the variables to be studied and apply a conceptual or theoretical framework to the research question; conduct a comprehensive and critical literature review related to the research question; and choose an appropriate research methodology and defend this choice. The work of research teams will result in both a class presentation and a final paper.

HCA 305 - Cultural Competencies in Health Care (3 Credits)

Prerequisite: None

Health care workers in large urban centers such as New York City encounter people from a great diversity of backgrounds. This can present challenges but ultimately lead to profound and even life-changing personal and professional growth. This course provides a framework for health workers to address issues of difference from the perspectives of power, privilege, health disparities, and social justice in the United States. Through the frequent use of group exercises, case studies, and professional reflections, students will examine and analyze these concepts as well as the concept of social construction of difference. Students will explore the overlap and differences among cultural awareness, cultural sensitivity, cultural competence, cultural proficiency, and cultural respect and humility. The course will not focus on beliefs, behaviors, or customs of specific cultural groups since, in urban centers, health care workers simply cannot become familiar with the many cultures with which they are likely to interact, nor can culture and difference be simplified into clear-cut categories. The course will help students identify their own cultures, acknowledge their own biases and ways they stereotype others, recognize how privilege and power interfere with cultural respect and humility, and develop a framework for relating to people from diverse groups. The course borrows and incorporates materials from various fields including medicine, nursing, dentistry, allied health, psychology, health education, general education, and sociology.

PADM 201 - Public Administration (4 Credits)

Prerequisite: None

This course will examine the growth, structure, role, and methods of local and federal bureaucracies and their impact on American government and society. It will introduce students to the subject of bureaucracy in American government and will survey the major areas of study in Public Administration, including the context of public administration, the meaning of federalism and intergovernmental relations. In addition the course will address organizational theory and behavior, decision-making, leadership, policy implementation, budgeting, personnel management, performance management, legal and regulatory constraints, ethics and accountability. Students will become knowledgeable about the roles and functions of public agencies and will acquire a grasp of current issues and controversies concerning public bureaucracies and public policy.
